

Landmark Exxon Climate Change Case Heads to Trial

10/21/19

Exxon Mobil will head to trial in Manhattan this week to defend against the New York attorney general's claims that it deceived investors about the risks climate change poses to its business.

Speaking to Law360, [partner Sean Baldwin](#) explained that the three-week bench trial will be the first in New York state court to squarely address U.S. fossil fuel companies' understanding of climate change and the risks it presents to their businesses. "There's not going to be proof of the actual effect of climate change on all those issues, but on [Exxon's] understanding of the effect of it," he said. "That could even be more compelling, in a way, than what a lot of other climate change-related lawsuits have tried to do."

While the burden of proof for the New York AG is lower than what the SEC or a private shareholder would have to prove, the AG's office must still show that Exxon's allegedly false statements materially impacted investors' decisions.
